## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/14/04 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 11-12 are rejected under 35 U.S.C. 102(b) as being anticipated by et al (6655983).

Ishikawa (Figures 1-10) shows a socket for electrical parts having a body with a contact unit with a first plate 8, a second plate 2 and a spacer 3 with a hole receiving a plurality of contactors 7 without touching the spacer.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1, 4-10 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Ishikawa et al (6655983).

Ishikawa (Figures 1-10) shows a socket for electrical parts having a body with a contact unit with a plurality of plates 8, 3, 2 and a spacer 4 with a holes and a plurality of contactors 7 placed in the hole for establishing connection between a circuit board and an electrical part 10 wherein the hole in the plates are of different sizes to form stepped holes. The hole in the intermediate plate 3 is larger than those in the uppermost plate 8 and the lowermost plate 2. The contactor abuts the circuit board elastically and is formed with positioning portions to be positioned on the circuit board.

But Ishikawa does not show a fourth plate. The instant invention does not provide any reasons or specific problem to be solved by having the fourth plate. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide a fourth plate because this would require a mere duplication of essential parts, which involve only routine skill in the art. *St. Regis Co. vs. Bemis co.*, 193 USPQ 8.

Art Unit: 2839

As to claims 7-8 and 10, providing a positioning portion fitted into a hole on a circuit board is common knowledge, well known and widely used in the art of electrical connections. It would have been obvious to one having ordinary skill in the art at the time of the instant invention to provide such a feature to Ishikawa's socket because this would provide a means to mount the socket to a circuit board as is well known in the art.

### ***Conclusion***

6. This is a REC of applicant's earlier Application No. 10/627869. All claims are drawn to the same invention claimed in the earlier application and could have been finally rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

***Response to Arguments***

7. Applicant's arguments with respect to claims have been considered but are not persuasive. Ishikawa (Figure 10) shows a plurality of contacts and the contacts not touching the spacer 3.
